

Sales & Profit Analysis Dashboard

Project Overview

The Sales & Profit Analysis Dashboard is an interactive data analytics project created using Tableau.

This dashboard helps analyze business performance by tracking sales, profit, customer segments, product categories, and regional performance.

The project provides meaningful insights through KPI cards, charts, filters, and trend analysis. It helps businesses identify high-performing regions, profitable categories, and sales growth patterns for better decision-making.

Objectives

Main Objectives of the Project

1 Analyze Overall Sales Performance

- Monitor total sales revenue
- Track sales trends over time
- Identify peak sales periods

2 Analyze Profitability

- Measure total profit
- Compare profit across regions and categories
- Identify loss-making areas

3 Understand Customer Segments

- Analyze Consumer, Corporate, and Home Office segments
- Identify which segment contributes highest revenue

4 Category-wise Performance Analysis

- Compare sales and profit across categories
- Identify top-performing products/categories

5 Regional Analysis

- Compare sales and profit by region
- Identify best-performing regions

6 Improve Business Decision Making

- Provide interactive insights using filters and dashboards
- Help stakeholders make data-driven decisions

Tools Used

- Tableau
- Microsoft Excel / CSV Dataset

KPIs Included

- Total Sales
- Total Profit
- Total Orders
- Profit Ratio %
- Average Sales

Visualizations Used

- KPI Cards
- Line Chart
- Bar Chart
- Pie Chart
- Map Visualization
- Top Products Table
- Filters/Slicers

Expected Outcome

The dashboard provides a clear understanding of:

- Business growth
- Profit trends
- Customer behavior
- Regional performance
- Product category performance

This helps organizations improve sales strategies and increase profitability.
